STARTUP BUILDATHON 2026

DevPilot

Learn *Real* Engineering Tools by Doing Them

- AI-planned paths
- Hands-on labs
- Honest credentials

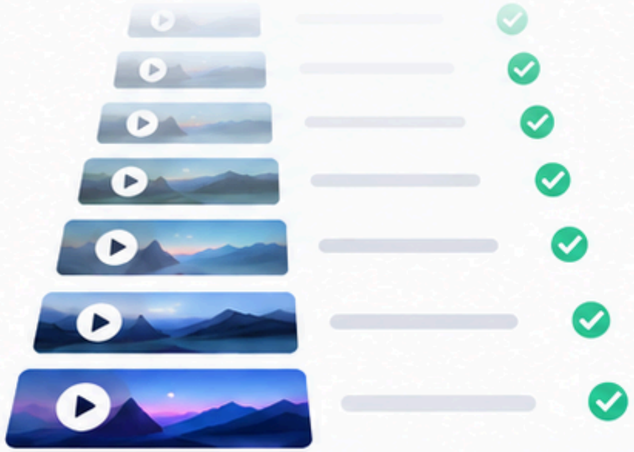
Team Error_404_Not_Found

devpilot.web.app

Watching isn't *doing*.

Millions of learners finish the video. Few can ship the work.

WHAT LEARNING LOOKS LIKE TODAY



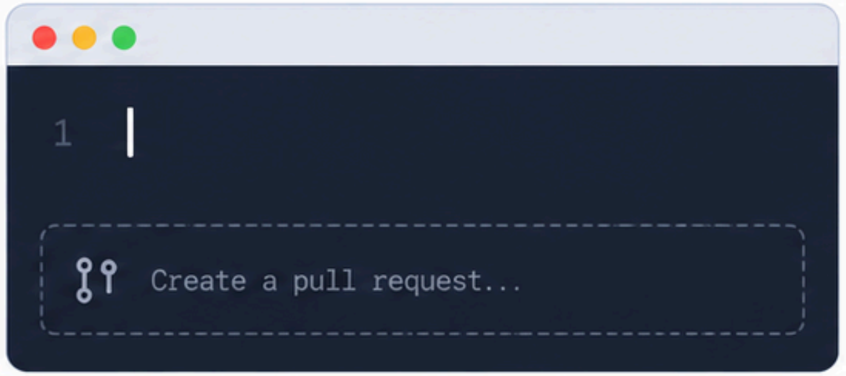
100+
hours of tutorials watched

10
certificates collected

0
real projects shipped

≠

WHAT EMPLOYERS ASK FOR



- Show me a real commit.
- Can you debug this?
- How was this skill checked?

The gap between knowing and doing.

Illustrative example.

Four things stand between you and the *job*.

Not motivation. Not talent. The system.

01

No path

What to learn, and in what order?

02

Passive learning

Videos get skipped. Chatbots hand over answers.

03

Hard setup

Editor, repo, tests: many quit before step one.

04

No trusted proof

'Completed' doesn't say how it was checked.

DevPilot closes all four.

Meet Arjun. His story is *everyone's.*

MEET ARJUN

3rd-year engineering student

Great at theory. Interview in 8 weeks.

Linux laptop | VS Code | Little time

01 Pastes the job he wants.

02 Gets a path, step by step.

03 Watches, and it counts.

04 Practises in his own VS Code.

05 Earns proof he can explain.

A composite persona for illustration.

One path. Five steps. *Real* proof.

Everything Arjun needs, in one place.

Gemini plans and hints. Tests grade.

01

Plan

Any goal or job description becomes a path.

answers: no path

02

Watch

Videos inside the app. Watching is measured.

answers: passive learning

03

Practise

Labs open in your own VS Code.

04

Check

Automated tests run on your computer.

answers: hard setup

05

Prove

A credential that says how it was checked.

answers: no trusted proof

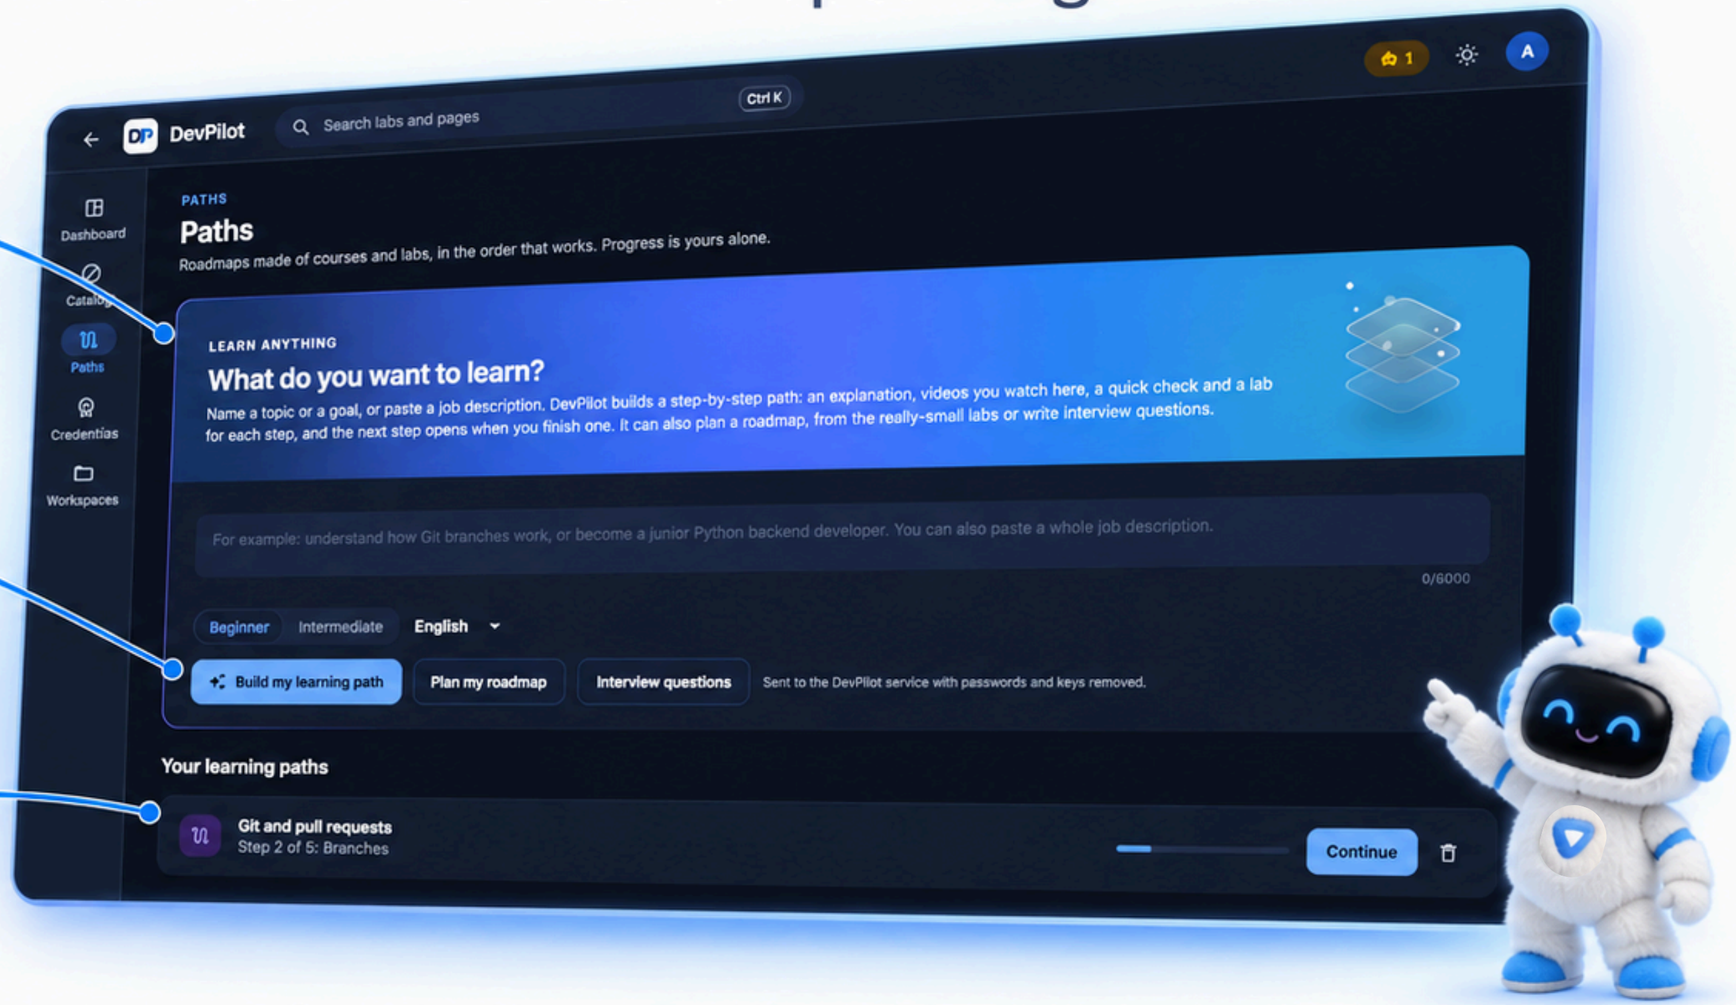
Type a goal. Get a *path*.

Arjun pastes the job he wants. DevPilot does the planning.

1 Say it your way
A topic, a goal, or a whole job description.

2 Steps in the right order
Explanation, video, quick check and a lab. The next step opens when you finish one.

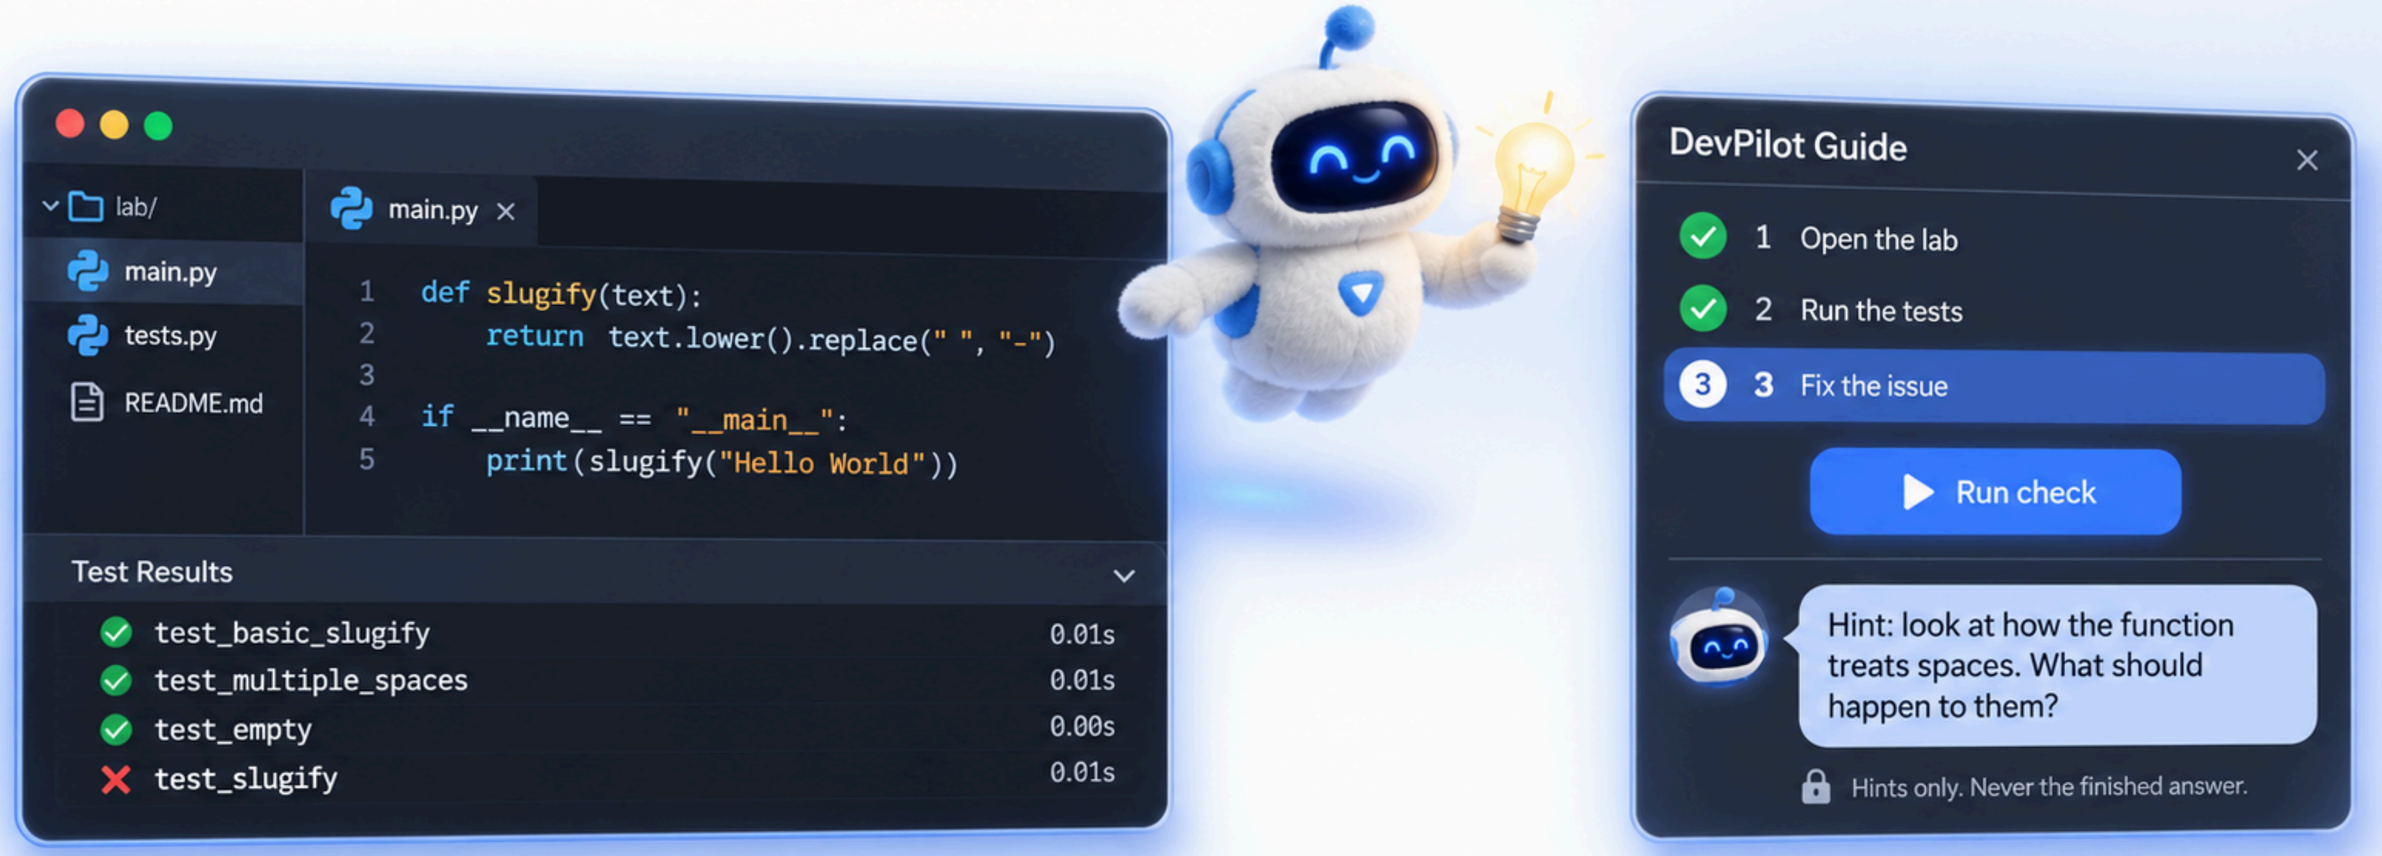
3 Plan, roadmap or interview
Three ways to use the same goal.



Sent to the DevPilot service with passwords and keys removed.

Real tools. *Real* tests. *Real* skills.

Labs open in the learner's own VS Code. *Checks run on* their own computer.



Your editor

Your computer

Hints, not answers

Proof that says *how*.

Not just 'completed'. A credential that tells *you how it* was checked.

AVAILABLE TODAY

Completed

CHECKED ON YOUR COMPUTER

Automated tests ran on the learner's own machine.

Skills practised | Date | Lab name

Trust, in two honest levels.

NEXT

Verified

CHECKED BY OUR SERVER

Our server re-checks the work. Cannot be self-reported.

Skills proven | Date | Re-checked result

We never call a self-checked result 'Verified'.

AI *helps*. Tests *decide*.

Gemini does the thinking. Automated tests do the grading.

GEMINI · GOOGLE CLOUD

- Plans the path from a goal or job post
- Gives hints, never the finished answer
- Explains errors and reviews code
- Writes interview practice questions

Grading is never AI.

AUTOMATED TESTS · YOUR COMPUTER

- Run on the learner's own machine
- Decide pass or fail
- Cannot be talked into a pass
- Unlock the credential

- Passwords and keys removed before a prompt is sent
- Strict output checks
- Daily limits per person

Small cloud. *Big* reach.

The heavy work runs on the learner's computer. The cloud only plans, signs in and stores.

Start with *colleges*. Grow with everyone.

Launch market: **India**

One agreement brings hundreds of learners.

START HERE

Colleges and institutes

Syllabus paths, class progress, placement-ready proof.

Per-student yearly licence

THEN

Learners

Students and career switchers learning on their own.

Monthly or yearly plan

NEXT

Employers

Credentials that say how a skill was checked, and custom labs.

Paid access and custom labs

Planned

Low cost to serve: labs run on the learner's computer.

It's not a mock-up. It's *live*.

Built in weeks. Ready to learn from real students.

BUILT AND LIVE

- Website live: devpilot.web.app
- Apps for Linux and Windows
- AI paths, tutor, coach and credentials
- 190+ automated tests in the app

NEXT 90 DAYS

- Pilot with colleges
- Server-checked 'Verified' credentials
- Mentor and class dashboard
- macOS and a second cloud region

WHAT WE NEED

- Colleges to pilot with
- Mentors to review our labs
- Feedback from real learners

Skills aren't watched. They're *built*.
